Supabase-Flutter Activity

CS Elective 2 | Mobile App Development

Price Filter + Pagination

Building on the ***update***, ***delete***, and ***filter*** features from today's session, add the following to your own Supabase-Flutter project.

Price Filtering

1. Customers who view your shop should be able to have a range of prices (price slider) they can choose from that consequently filters the list of products they can see.
2. Do the pagination using a Supabase query, handled through the frontend via a state management solution.

Price Filter + Pagination

Building on the ***update***, ***delete***, and ***filter*** features from today's session, add the following to your own Supabase-Flutter project.

Pagination

1. Show only 6-8 max number of products per page.
2. Do the pagination using a Supabase query, handled through the frontend via a state management solution.

Submission

1. Create new branch on your current repo and name it backend-filter-pagination.
2. Push your output on this new branch.
3. Submit the branch link in the corresponding submission bin on Daigler.
